阿奇霉素 following intravenous drip of azithromycin

Chen Huiyun  （Department of Internal Medicine, North China Electric Power University Hospital, Hebei Province, Baoding 071003, China）

ABSTRACT  A 21-year-old man with pneumonia was administered with IV azithromycin 0.5 g once daily. He developed persistence dull pain in the wrist and knee joint on day 2 after therapy. Physical examination showed every joint was normal. Laboratory tests revealed ASO and RF were also normal. Azithromycin was stopped and it was replaced with levofloxacin. Five days later, his arthralgia disappeared.

KEY WORDS  azithromycin; arthralgia
